

AdBlue®

AdBlue is a natural ingredient in our environment. It is used in the exhaust systems of Euro4, Euro5 and Euro6 trucks to reduce harmful emissions. It is injected into the exhaust gases as a post combustion process, before they pass through the SCR (Selective Catalytic Reduction) converter. AdBlue turns the nitrogen oxide into a harmless nitrogen gas and water vapour.

Most vehicles are typically fitted with a 70 or 150 litre tank and will need to be topped-up with AdBlue every two to three tanks of fuel. It is recommended that the vehicle carry a reserve supply of AdBlue to ensure the vehicle fitted with a SCR system will perform at its maximum efficiency.

AdBlue is non-toxic and poses no risk, if properly handled, to the environment, animals or humans.

AdBlue meets ISO 22241-1.

VOLVO OWNERS

Please refer to SCR Emission Control 5, page 3:147 of your current Owner Manual stating that other brands can be used as long as the products conform to ISO standard 22241-1. AdBlue conforms to this standard.

DIRECTIONS

Fill the Diesel Engine Fluid tank with AdBlue. It will be metered into the engine exhaust system by a dosing module. This averages to 3-6% of diesel fuel consumption.
